

3rd May 1976

Dear Gordon:

Just a note to say that after more adventures I'm safely back here, tired but happy. I tried my talk before high powered astronomers in Sydney and received very little flak. It seems I'm gradually exhausting all criticism, real and imaginary. Perhaps the "Endless, Boundless Stable Universe" has more going for it than I originally thought.

I've not tried the calculator algorithms yet, but will practice soon. It may be useful on my \$17 K-Mart instrument.

The ancient Belmar circuit diagram seems very complex. After a signal got through all those tuned circuits, the bandwidth must be so small that it is only suitable for a hand keyed telegraph circuit.

Thanks again to you and Lucy for putting yourselves out on my behalf. After a nomadic life you will deserve the very nice home on the water. It would be the admiration of many.

Hope to see you again toward end of year.

Aloha,

Grote
