Mr. Ralph E. Williamson David Dunlap Observatory University of Toronte Richmond Hill, Ontario Canada

Dear Ralph:

As promised in my letter of May 22 I am enclosing herewith one copy each of data at 20.5, 60, 160, and 480 Mc/s. All the intensity values are in the same figure namely, watts per square centimeter, per circular degree per megacycle band. The rest of of the information I believe is self explanatory and I will be pleased to hear of what use you will be able to make of this information.

Best regards,

Grote Reber
