Ithaca, New York

Dear Dr. Barrows:

I have been informed by the Office of Naval Research that you are undertaking a program on the measurement of radio waves arriving from the sky. Naturally, I am quite interested because for a long time now I seem to have been the only enthusiast in this work. Enclosed is a reprint describing my last published results.

Currently I am carrying on a survey at 480mc and constructing equipment for use at 1000mc. It is evident that ONR desires our two programs to be coordinated so I will be pleased to learn what phases of the subject you expect to attack and the current state of the work.

Very truly yours,

Grote Reber
