Dr. J. C. W. Scott, Radio Division  
Defense Research Board  
Shirley Bay, Ottawa  
Canada

Dear Dr. Scott:

This letter refers to some correspondence we exchanged about six months ago. If convenient, I would like to come to Ottawa and spend two weeks from January 22nd to February 4th looking over your ionosphere records. The phenomena I am interested in have no importance military or communication wise, but probably occur fairly frequently judging by the records secured at Hobart. These are:

- A. Examples of the gyro echo, both with and without sporadic E being present.
- B. Examples of wide stratification (H) which might be interpreted as a G layer.

During my stay, I also wish to see McKinley and Covington. Please advise me whether or not the above plan is satisfactory to you; and if so, perhaps you could make a hotel reservation for one in my name starting on the night of the 22nd. Someplace near your laboratory or with access to public transport would be most desirable. I may be contacted the 6th thru the 17th at

Grote Reber  
Carnegie Institution of Washington  
5241 Broad Branch Road, N.W.  
Washington, D.C.

Hoping to hear from you favorably, I am

Sincerely yours,

Grote Reber
