**To:** Pam Contractor <pam0924@embarqmail.com>, Fred Lo <flo@nrao.edu>, Alan Bridle <abridle@nrao.edu>, Shuang-Nan Zhang <zhangsn@ihep.ac.cn>

**CC:** don york <don@oddjob.uchicago.edu>

Caption, Figure 12.3. Augustin is misspelled.

No it's not!

we say explicitly in text  
then space  
arrange for lowest  
free  
device for higher

Figure 12. 10. The caption, in describing the three images at the lower right, does not connect exactly with the three types in lower right: Sparse aperture, Dense aperture, dishes. Would be good if all three appear explicitly in the caption

Second par., 2nd to last line. Four Nobel Prizes, but the physical discoveries were not the same for all pairs of laureates. Maybe say that 8 laureates shared 4 Nobel Prizes for five separate discoveries in radio astronomy.

pedantic!

Under "Insert Figure 12.6", first par, 3rd line from end. Space after 0.1%

ok in original?

Footnote on page 6: Does JAO have a headquarters? Who is the director and what is the management entity (equivalent to AUI)?

ok to refer to web site for details?

Page 7, last line of last par. Is East Asia adequate, or should China be mentioned specifically? I am under the impression that some important detector work did and does go on there, for ALMA.

Fred?

~4m.

SKA specifications: item 1) lists long limit of SKA as 4.3 meters, but just above "Insert Fig. 12", it says 3 meters. Consistency needed, or can either answer be right, depending config. of instrument and electronics?

ok, make all ~4m?

0.07 GHz

Page 12: bottom, item 2). The Allen Array has recently been defunded. Is it relevant?

Give benefit of doubt?
