

8th August, 1966.

Mr. D.B. Muldrew,
Defence Research Board,
OTTAWA ... Canada.

Dear Mr. Muldrew,

Two years ago I received a preprint of your report discussing electron density in the F region measured from Alouette satellite. Three regions of low electron density concentric with the north geomagnetic pole were shown. This preprint has become mislaid by my colleague here, G.R.A. Ellis. I wonder if the substance of the report ever appeared in print formally? If so, please supply a suitable reference; or perhaps you can send a reprint. If not, I would like to secure a copy of the latest version of your findings. This I intend to include with my radio astronomy results now being organized into a scientific paper.

Yours faithfully,

G. Reber.

GR/JCA
