Dear Ken:

Continuing my letter of 23/11/94, it has been decided I'm to make a speech entitled "The Big-Bang is Funk" at AAAS meeting at Norman, Oklahoma on 23/5/95. My ticket eastward should get me into Norman on 28/5/95. Then on 24/5/95, I'll push on to Green Pank. I think the airport near Norman is named after I'll Bogers. Te'll figure out return ticket later in June or July. I'll want to stop at theaton, Illinois: O'Hare airport near Chicago.

Continuing last paragraph of my letter 23/11/94; I've been informed by grapevine that there are over 400 Miniteman Missles available. They are probably more suitable than ICBMs. Please find out where these are, and who is in charge. I'd like to secure ten for free. Then remove explosives and place in containers. They can be shipped by sea freight

I've discovered a desolate place 90 miles west of here on coast of Tasmania. The rockets will land 40 miles to sea off eastern shore of Tasmania. Lobedy will be bothered. The container of liquid hydrogen will be fabricated here. Please find out where these Miniteman Missles are and make an appointment for me to examine them sometime in June. This whole matter is rather shrouded in secrecy. You may have to contact your Senator or Congressman to get some action. There will probably be a lot of stumbling, fumbling and bumbling. So you better start making anguiry promptly. Don't wait until I arrive.
