Dr. Martin Ryle
Cavendish Laboratory
Cambridge, England

Dear Dr. Ryle:

Your three reprints on radio stars found their way to me here at my home. Thanks very much.

Last spring I left the Bureau of Standards, where the opportunities seemed quite limited, to strike out for my self again. During the past eight months I have been in Hawaii where I was fortunate in securing the use of the top of an old volcano. Since the latitude is low and the horizon is entirely water, it seems like a good place to do Lloyd's mirror experiments. I expect to return to the Islands next spring to finish the job and get some results. In the mean time please contact me at the above address until I can establish a permanent one in Hawaii.

If you will keep me on your mailing list for reprints I will deem it an honor and a kindness as I am greatly interested in the work being done at Cavendish. When I get something worth printing I will be pleased to reciprocate in kind.

A friend of mine, Miss Jean C. Thompson is presently working for N.A.T.O. Some time this spring she will probably call at the Cavendish Laboratory. Any courtesy you may extend to her, I will deem a favor to me.

Sincerely yours,

Grote Reber
