

14th January, 1964.

Mr. A.J. Higgs,
Radio Physics,
C.S.I.R.O.,
University Grounds,
SYDNEY, N.S.W.

Dear Arthur,

Some time ago I was presented by unknown parties with a radio map of the Large Magellanic Cloud. It is a simple set of more or less concentric contours and presumably was made by Alec Shain at 19.7 m.c. I have been unable to find any article relating to such a map in the Australian Journal of Physics. Please try to find out if such a map was really made similar to my description, and if so, please give me a reference to where the information was published or, send to me a reprint.

When are you or Taffy coming to see my two megacycle radio telescopes?

Best regards,

Yours sincerely,

Grote Reber.
