

1st July, 1965.

Mr. Rhys Jones,
Anthropology Department,
University of Sydney,
SYDNEY...N.S.W.

Greetings Rhys,

Thanks for your interesting letter of 25th last. A note also came from Richard Wright stating my article would probably appear in Mankind next November.

I would like to help you at West Point North after ANZAAS. Winter there is more mild but wetter than Hobart. I propose to drive us to Smithton or Marrawah but hesitate to take my sedan out in those ruts during winter. Perhaps we could rent a Landrover from Murphy or one of his acquaintances. I'll cover any charges.

Science, 25 Jan. 1963, Vol. 139, p.332-4, carries an article entitled "Submergence of the Connecticut Coast" by A.L.Bloom and N.Stuvier. They say the sea rose 24 feet from 9 to 3 millenia BP and 9 feet from 3 millenia BP to present for a total of 33 feet. This may or may not apply to Tasmania. What do you think?

Regards,

Grote Reber.

GR:JEG

Science, 25 Jan 63, Vol 139, p 332-4.

"Submergence of the Connecticut Coast"
A.L. Bloom + M. Stuiver.

From 9000 to 3000 BP the sea rose	24 feet
From 3000 BP to present " " "	<u>9 feet</u>
Rise since paleolithic times	33 feet.
