

Nov. 5, 1959

To - Mr. Grote Reber

From - Lillian Ness

Mr. Struve received a letter from Leo Goldberg who states:

"..... I was particularly pleased to have Grote Reber's ideas concerning the possibility of radio frequency observations from space vehicles. I was especially interested in his comments about Cerenkov radiation and wonder whether he has any direct observations of radio radiation as a result of the passage of cosmic rays through the high atmosphere or whether he is referring to the optical observations that have been made with photomultipliers from the ground."

Do you have any answer to this question?
