Dr. J. L. Pawsey
c/o Australian Embassy
Room 523
1785 Massachusetts Avenue
Washington, D. C.

Dear Dr. Pawsey:

When you were here I gave you 5 prints showing cosmic static contours at various frequencies from 20 Mc to 480 Mc. At the time we discussed the significance of these contours. Since then I have drawn up a short paper which formulates our ideas in writing. Please attach the enclosed copy of this paper to the 5 prints that you now have. This material is not restricted in the military sense but is not intended for general public consumption. You may show and discuss it with anyone you believe to be interested and I will be pleased to receive any comments or suggestions you obtain from other persons interested in this field of endeavor.

I hope that your stay in Europe will be very profitable in the field of astronomical radio and I look forward to seeing you in person a year or so hence.

Best Regards,

Grote Reber
