Dear Sirs:

I am writing a biography of an employee (or perhaps former employee) of yours for a children's biographical encyclopedia. Hence I need two or three to a dozen sentences of information about what he has done since the 1940s.

His name is Grote Reber, a radio physicist, noted for having made the first radio telescope and making a map of the radio radiation of the sky.

Our biography will, of course, tell about his pioneering work in the 1930s; and we already have enough information about that. But we know almost nothing about the rest of his life. Any information readily available or any references to articles about his later life will be appreciated. Or, if he is still in your employ, or if you know where he is presently located, it is possible that we could get the information directly from him.

Cordially yours,

Lawrence H. Starkey
Editor

Mr. Reber -

We have acknowledged receipt of this and said that it was being forwarded to you. We leave the rest up to you.

JE
