Dear Alan

First of all, Congratulations!

By the way: I remember that you found once that sources with very steep spectra were things in clusters of galaxies, but can't find this written down anywhere except possibly your thesis (which person X seems to have on permanent loan). Can you help, or? authorise quoting your thesis if (a) you still believe it (b) aren't writing it up v. soon. Phil & I are writing a review article on spectra, and this would be one of the very few correlations worth quoting.

Merry Christmas & best wishes

Peter
