

21/5/85

Lloyd Higgs, Director
Dominion Radio Observatory
P.O. Box 248
Penticton, B.C.
Canada, V2A 6K3

Dear Lloyd:

Thanks for your cordial letter of 30/4/85. The letter and maps at 408mc from Rob Roger arrived same day, 7/5/85. Again, thanks. I'm delighted the whole system is operating so well. These SNR seem to be in profusion. I've a hunch that as we progress it will be found the visible part of universe becomes less impressive and our comprehension of the universe will change dramatically.

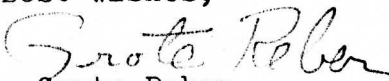

During recent years I've become rather deaf, so I do poorly over the fone. Also there is an awkward time difference of 18 hours. Noon at Penticton is 6am the next morning at Bothwell. I would propose to make a tape of perhaps 10 minutes discussion about radio astronomy and send it to you well in advance.

There is another possibility, altho rather uncertain at present. I may be making a trip to Illinois early october. If this materializes, I'll stop a couple of days at Penticton on the eastward journey. I'd propose to make a 20 minute discussion about radio astronomy with emphasis about my activities at Wheaton 1937-1947. I should know by end of June.

September 18 is a wednesday. Does this particular date have significance? If not, perhaps it could be moved along a week to 25th. Don't do anything until I find out what the people in Wheaton are going to do.

However the matter, I'll be represented at your gathering in one manner or another. The CSIRO at Hobart has a telex number TASREG AA58300.

Best wishes,

Grote Reber
