R. L. to JGD

Dear John,

The faintest discrete source I've been able to identify at 2.1 megacycles is Pictor A at 0520 RA, - 46° declination. I would like to know more about this object. Very little information is available. Perhaps your observatory in conjunction with Mount Stromlo could make a study leading to its identification. Your consideration, comments and suggestions will be much appreciated by me.

Best regards,

Grote

Grote Reber.
