File Référence 8302-1

September 26, 1975. *dated 28th, 1975 - 11/3/75*

Mr. Grote Reber,
"Wetheron"
Bothwell, Tasmania,
Australia 7411.

Dear Grote:

I was very pleased to hear that you will be visiting Penticton again and we will be delighted to show you what we are doing. The 10 MHz array has recently been dismantled but we have a new project afoot to map the north polar region by synthesis at 22 MHz.

Some of the 10 MHz data is still unpublished and is in custody of Jim Caswell, presently at CSIRO in Australia. Perhaps if you are in Sidney before you leave for North America you might put some pressure on him to complete the reduction of the data he has!

We will make reservations for you as soon as we have a definite arrival date. In any case, there should be no trouble at that time of year.

We are all looking forward to seeing you again.

Yours sincerely,

John Galt
