U.S.A.

Dear Dennis:

Three reprints by you and your associates have found their way to me here via Washington, D.C. and Wheaton, Illinois. Thanks very much. The ones about the eclipses were particularly interesting. I have always thought the sun was much larger at meter waves than optical waves. It is good quantitative data you have.

While I am no longer with NBS, I am still interested in radio astronomy and will appreciate being kept on your mailing list. Please address me as above for the next few years.

Out here I am getting set up to try some Lloyds mirror experiments where it is possible to observe both the rising and setting.

If you are ever out travelling please stop by, as this is a beautiful place.

Best regards,

Grote Reber
