*See envelope on Beans + Vines*

Dear John,

Just a note to tell you about the grape stalks. Four packets of four stalks each were sent. All arrived in good order. The stalks were treated by strong systemic insecticides and fungicides to prevent entry of undesirable pests. Even so, thirteen out of sixteen sprouted. Ten of these are going well. I am informed this is a good percentage. They will be called Palatine variety. It is place in Illinois I mailed the first packet. Please pass on the good word with thanks to Norwegian whose name I cannot remember.

The ionosphere remained opaque at 1155 KC all winter, so observations of cosmic static were a failure.

Best wishes,

Grote Reber,
